

# Synology®

## Digital IP Surveillance Stations

The Synology Surveillance Station 3 provides you with an easy and economical network video recording solution. By connecting supported IP cameras to the network & following simple steps to configure your Disk Station, you can start to safeguard your environment with video live-view, video recording, event playback and event notifications, all with the AJAX-based web interface of Surveillance Station 3.

### Feature-rich Surveillance Server

### Includes 500GB Hard Drive!

#### Live View

The Live View page displays real-time videos of all configured cameras. For cameras that support PTZ (Pan/Tilt/Zoom) or audio, you can use the buttons on the right-hand panel to adjust the camera's shooting angle & audio volume. In addition to the optical zoom feature provided by the camera, the Surveillance Station 3 also provides digital zoom function for immediate operation. You can drag-n-move the video screen with your mouse, or double-click on the video screen to enlarge it to fit the frame instantaneously. If you see something on the live view that you would like to save, simply click on the snapshot button to save the image. Surveillance Station 3 also allows you to view camera live-view in full-screen mode.
